

Introduction to Tech Source

David Kerr is the owner of Tech Source and has over 40 years of experience in the IT industry. He began programming in high school and went on to help teach one of the earliest BASIC programming courses while attending college. His career spans data services, enterprise IT and 15 years in the oil and gas construction sector at McDermott International, where he worked in systems administration and later in corporate security and compliance.

After working as an outsourced IT vendor for AT&T, David founded his own consulting practice, spent time in AT&T Cellular outside sales, and ultimately acquired Tech Source in 2005. Under his leadership, the company transitioned from a residential break/fix provider into the managed service provider (MSP) it is today. David's leadership philosophy is heavily influenced by servant leadership principles—shaped early through his experience as an Eagle Scout and later reinforced as he helped guide his son to earn the same rank through multiple high-adventure scouting programs.

I started the company installing network cabling which we still do today. I love helping small businesses and truly care about you and your success. At the end of the day, what we do is solve problems for you using world-class tools and proven processes.

One example of this was during hurricane Ida. A client needed to know if they would have internet access if they brought in a generator. To answer that, we brought a battery backup (UPS) onsite and demonstrated that we could power their basic infrastructure, including their Internet fiber modem, router and firewall. Once this was proven, they had a generator delivered and were able to bring up their critical systems, allowing them to continue operating their business.

We are always looking for new customers with an easy-going disposition, five or more computers, and are located in the Metairie, Covington, Mandeville or Slidell areas. We serve professionals and businesses across a wide range of industries, including accounting, architecture, automotive, dental, engineering, legal, manufacturing, and oil & gas.

You're welcome to visit our office and see some older, still-functioning technology, such as our telegraph or the first electrically powered AM radio. We share this as a reflection of who we are: approachable, human, and not afraid to enjoy a little humor along the way.

Once we understand your business problems and goals, we can use technology to help you achieve both short-term wins and long-term success. Our services range from enterprise-level consulting to help desk support, proactive monitoring, compliance and simple computer break/fix services.
